DILINI SILVA

Full Stack Developer Intern
Panadura, Sri Lanka |dilinichamikasilva@gmail.com | (+94) 70 139 8043

SUMMERY

Computer Science undergraduate specializing in full-stack web development using React, Node.js, Spring Boot, and MongoDB. Experienced in building secure, scalable web applications through academic and personal projects. Strong foundation in OOP, RESTful APIs, and database design. Seeking a Full Stack developer internship to contribute to real-world applications.

EDUCATION

GDSE-Graduate Diploma in Software Engineering 2024 - 2026
Institute of Java Software Engineering

Certified AI & ML Engineer 2025 - 2026
Institute of Java Software Engineering

G.C.E (A/L) Examination (Physical Science) 2017 - 2020
St. John's College Panadura

TECHNICAL SKILLS

Languages & Frameworks	React Js, Node Js, Express Js, Java, Spring Boot, Javascript, TypeScript, Python, React Native
Tools & Technologies	Maven, Hibernate, RESTFul APIs, JWT, Numpy, Pandas, Matplotlib, Seaborn
Databases	MySql, MongoDB, Firebase
Platforms	Git, Docker
Foundation & Concepts	OOP, Software Engineering Principles

SOFT SKILLS

Problem-solving , Communication , Teamwork , Time management

PROJECTS

Ship Fast| Full Stack Developer

Ship-Fast is a comprehensive maritime shipping management system designed to streamline and automate shipping operations.

- Developed a Spring Boot-based system to manage ports, ships, vendors, employees, inventory, and shipping services...etc.
- Built using a full-stack Java (Spring Boot, Hibernate, MySQL) and JavaScript (jQuery, Bootstrap) architecture.
- Streamlined maritime logistics with automated tracking, reporting, and role-based access control..
- Improved operational efficiency, reduced errors, and supported reliable shipping management.
- Implemented automated invoice generation and secure currency conversion through API integrations.
- Integrated Cloudinary for secure document storage and Apache POI for real-world Excel automation.
- Incorporated Spring Security and JWT for secure access, and Swagger for robust API management.

Tech Stack: Spring Boot, HTML5, CSS3, JavaScript, Bootstrap, JWT, MYSQL, Hibernate

Cash Pilot | Full Stack Developer

A comprehensive financial management system I developed to transform the way we interact with our money. Moving beyond static spreadsheets, CashPilot offers a forward-looking approach to budgeting combining AI-driven planning with real-time expense tracking.

- Implemented zero-based budgeting logic ("Total Pool") to ensure complete allocation of funds.
- Integrated custom AI logic for automated budget category suggestions.
- Enabled transaction verification through bill/receipt image uploads.
- Designed and maintained decoupled architecture with separate frontend and backend repositories.
- Incorporated smart automation features, including real-time search, automated PDF report generation, and budget locking mechanisms.
- Implemented secure, frictionless authentication using Google OAuth 2.0.

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS

Terra Diary |Mobile Developer

Terra Diary is a premium, high-performance travel journaling application built with React Native and Expo. It allows explorers to document their journeys, visualize routes through interactive map animations, and relive memories via an immersive Augmented Reality (AR) finder.

- Developed a cross-platform mobile application using React Native and TypeScript to capture and share travel memories in real-time.
- Implemented secure user authentication and profile management via Firebase Auth with private and public visibility controls.
- Integrated Cloudinary API for high-performance multi-image uploads and optimized media transformation for a rich user experience.
- Engineered a real-time Global Feed using Firestore, leveraging Composite Indexing for efficient data filtering and sorting.
- Optimized application performance by utilizing React hooks like useMemo and onSnapshot to ensure efficient data synchronization.
- Designed a modern UI/UX using NativeWind (Tailwind CSS) featuring interactive timeline views and full-screen image sliders.

Tech Stack: React Native, Expo, Firebase (Auth/Firestore), TypeScript, NativeWind, Cloudinary API

Clinical Risk Stratification & VCI Scoring Model | Data Analyst

Developed a Clinical Decision Support Tool: Designed and implemented the Vitality Complexity Index (VCI) to quantify patient stability and predict 30-day hospital readmission risks.

- Developed a Strategic Patient Risk Stratification System using Python to predict 30-day hospital readmissions for the Vitality Health Network (VHN).
- Engineered the Vitality Complexity Index (VCI) using custom Python functions to quantify patient risk based on the LACE index (Length of Stay, Acuity, Comorbidities, Emergency history).
- Implemented automated data sanitation in Pandas to handle non-standard nulls, filter deceased records, and stabilize high-dimensional clinical datasets.
- Executed Exploratory Data Analysis (EDA) with Seaborn and Matplotlib to identify readmission drivers across demographics and medication regimens (Insulin vs. Oral).
- Validated predictive accuracy by correlating VCI risk tiers (Low, Medium, High) with actual historical readmission rates to support clinical triage decisions.
- Synthesized technical insights into a Board-level Strategic Report, providing data-driven recommendations to reduce CMS financial penalties.
- Built a custom web scraper using BeautifulSoup and Requests to dynamically map cryptic ICD-9 diagnosis codes to human-readable clinical descriptions.

Tech Stack: Python 3.x, Pandas, NumPy, Seaborn, Matplotlib, BeautifulSoup4, Requests
